# Topology and Manifolds

Homework 1

Due on February 14, 2023, before class

#### Problem 1 [4 points]

Let  $M_{n \times n}(\mathbb{R})$  denote the set of real  $n \times n$  matrices. We consider the function

$$f: M_{n \times n}(\mathbb{R}) \to \mathbb{R}, f(A) = \det(\mathbb{1} + A).$$

Show that f is differentiable and  $Df(0)(H) = Tr(H) := \sum_{i=1}^{n} H_{ii}$  (the trace of H).

#### Problem 2 [6 points]

For fixed integer n, we consider the functions

$$f_m: \mathbb{R}^n \to \mathbb{R}, f(x) = \|x\|^m,$$

for integers  $m \geq 1$ .

- (a) Show that  $f_m$  is of class  $C^{\infty}$  for even m.
- (b) Show that  $f_1$  is differentiable on  $\mathbb{R}^n \setminus \{0\}$ , but not at zero.
- (c) Is  $f_3$  of class  $C^1$ ?

### Problem 3 [6 points]

Let  $f : \mathbb{R}^m \to \mathbb{R}^n$  be of class  $C^1$ .

(a) Is the following generalization of the mean-value theorem true of false (prove your answer)? For every  $x, y \in \mathbb{R}^m$  there is a  $z \in \mathbb{R}^m$  such that

$$f(x) - f(y) = Df(z)(x - y).$$

(b) Show that for all  $x, y \in \mathbb{R}^m$  we have

$$||f(x) - f(y)|| \le C||x - y||,$$

with  $C = \sup_{z \in I_{xy}} \|Df(z)\|$ , where  $I_{xy}$  is the line segment connecting x and y, and where  $\|A\| := \sup_{\|x\|=1} \|Ax\|$  is the operator norm of a linear operator A.

(c) Using (b), show that for all  $x, y, a \in \mathbb{R}^m$  we have

$$||f(x) - f(y) - Df(a)(x - y)|| \le ||x - y|| \sup_{z \in I_{xy}} ||Df(z) - Df(a)||.$$

## Problem 4 [4 points]

- (a) For each  $k \ge 1$ , give examples of functions  $f_k : \mathbb{R} \to \mathbb{R}$  which are  $C^k$  but not  $C^{k+1}$ .
- (b) Give an example of a bijective function  $g: \mathbb{R} \to \mathbb{R}$  which is  $C^{\infty}$  but whose inverse is not  $C^{\infty}$ .
